

PRODUCT SUMMARY SHEET

RUBBER

Marbocote Ltd, based in the UK, manufactures a complete range of water based release agents that are used throughout the world by all the leading manufacturers of Elastomer/Rubber components. From automotive rubber to metal components, through to belting, matting and pharmaceutical goods.

Marbocote Ltd has continued the advancement of semi-permanent release technology to give the most durable release film combined with the maximum release performance. These properties combine to give our customers significant process benefits and cost savings. This makes Marbocote the product of choice for many the major rubber manufacturers including Hutchinson, Boge Elastmetall, Trelleborg and many more.

Our product range is extensive and we have the ability to formulate to customer requirements.

Marbocote W1141: Leading edge technology, giving the most durable surface that delivers increased release performance with no transfer and reduced mould build. Excellent release of all rubber types giving maximum number of releases per application and helps keep the mould cleaner for longer. W1141 forms a hard resinous film giving both durability and high slip.

Marbocote W610: Hard durable coating suitable for transfer sensitive applications, used mainly in rubber belting applications.

Marbocote W2491: A high slip product used for rubbers that are difficult to release, e.g. deep cavities or short hose. Can also be used for castable PU and in the Rotational Moulding industry.

Marbocote W810: High performance cost competitive product suitable for applications when maximum number of releases per application is not primary goal. Developed specifically for the Tyre industry where it is applied each shift. Product gives extended mould life (up to 6 times more than competitive products) and produces improved release and finish to tyres and other components. Also available in 400ml non-flammable (compressed air) aerosols.

Marbocote W1200 AR: Rust inhibition formulation. Will inhibit rusting of moulds.

Marbocote W3010: Developed as a mould protector, to significantly extend cleaning cycles of moulds. W3010 aids the flow of rubber in the mould (Increased slip) and also aids easy release for sticky, softer rubbers formulations.

Mould Coatings: Water & solvent based products used to coat moulds immediately after cleaning, giving a complete seal during storage.

Marbocote DNS W1000G/1: A blend of polymers that are designed to ease installation of a wide range of tight-fitting rubber and plastic parts during post cure assembly. W1000G/1 provides a thick coating of lubricant which stays in place where it is applied and has a prolonged drying time to help with application on vertical and overhead assembly operations.
