

Marbocote, based in the UK, manufactures a complete range of release agents and mould coatings that are used throughout the world by all the leading manufacturers of automotive, truck and solid tyres, making Marbocote the product of choice for all major tyre manufacturers.

Marbocote has continued the advancement of semi-permanent release technology to give the most durable release film combined with the maximum release performance. These properties combine to give our customers significant process benefits and cost savings.

Our product range is extensive and also includes inside/outside tyre paints, antitacks and products for tyre building machines.

**Marbocote W1141:** Latest technology, giving the most durable surface that delivers increased release performance with no transfer and reduced mould build. Excellent release of all rubber types giving maximum number of releases per application and helps keep the mould cleaner for longer. W1141 forms a hard resinous film giving both durability and high slip making it suitable for deep cavities, solid tyres or large truck tyres.

**Marbocote W810:** High performance cost competitive product suitable for applications when maximum number of releases per application is not primary goal. Developed specifically for the Tyre industry where it is typically applied once per shift. Product gives greatly extended mould life (up to 6 times more than competitive products) and produces improved release and finish to tyres and other components. Also available in 400ml non-flammable (compressed air) aerosols.

**Marbocote W1200 AR:** Newly developed rust inhibiting formulation. Will inhibit rusting of moulds heated by direct steam heat.

**Marbocote W3010:** Developed as a mould protector, to significantly extend cleaning cycles of moulds. W3010 aids the flow of rubber in the mould (Increased slip) and also aids easy release for sticky, softer rubbers formulations.

**Marbocote 227CEE:** Solvent based semi-permanent release agent for tyre building machines.

**Antitacks:** Batch-off Anti-tacks which give high release/separation capability. The products are based upon a blend of organic biodegradable surfactants and inert fillers which are dispersible in water. The products should be diluted prior to use. When the excess of water has evaporated from the surface of the compound, the remaining film is dry with minimal slip.

**Inside Tyre paints:** Water based inside tyre paints with very high lubricity giving an extended bladder life; available in different colours (white, grey and black) and solids content.

**Outside Tyre paints:** Water based outside tyre paints with very good air bleeding properties and uniform finishing. We can also offer a water based product for tyre masking and repair.
